(54) Title: CORRUGATED HANGING DISPENSER

(57) Abstract: A dispensing container (10, 110) for fluent material, which container is intended to be hung vertically from a support, such as a hook, is provided. The dispensing container has a tubular body, with a bottom dispensing region that is configured to promote the collection of the fluent material and guidance of the fluent material toward the inlet aperture of a dispensing nozzle (50) that is received in the side (30, 130) of the bottom dispensing region. The dispensing container (10, 110) is preferably fabricated from corrugated paper-board or similar material, and is preferably configured to serve as the shipping container for the fluent material as well, so as to reduce or eliminate the need for a further outer shipping container. The fluent material may be contained within a separate liner structure, within the surrounding tubular body, in a "bag-in-box" type of container arrangement.
